Introduction - Fluorine forms stable and isolable compounds with essentially all elements, including the noble gases Kr and Xe . Fluorine-containing molecules often feature uncommon structures. Thus, fluorine is frequently involved in the formation of compounds with elements of groups 14-18, which are defined as hypervalent. The synthesis of fluorinated organic compounds is nowadays heavily based on the availability of specifically designed reagents, compound $\mathbf{4}$ below being an example.

Hint: Any element $E$ in the series $E^{1}-E^{8}$ may be represented more than once.

4

## I Molecular Geometry

4.1 Identify elements $\mathbf{E}^{\mathbf{1}}, \mathbf{E}^{\mathbf{2}}, \mathbf{E}^{\mathbf{3}}$, and $\mathbf{E}^{\mathbf{4}}$ in the three species $\mathbf{1 , [ 2 ]}$, and [3] ${ }^{-}$. Write 4.0pt the answer in the appropriate box on your answer sheet.

1

[2] ${ }^{-}$

[3]

1: neutral, non-zwitterionic molecule, $\mathbf{E}^{\mathbf{1}}$, square pyramidal; $\mathbf{E}^{\mathbf{2}}$, octahedral,
av. $d\left(E^{1}-F\right)=1.91 \AA$; av. $d\left(E^{2}-F\right)=1.58 \AA$
[2] ${ }^{-}$: anion, square pyramidal
av. $d\left(E^{3}-F\right)=1.96 \AA$
[3]-: anion, pentagonal planar av. $\mathrm{d}\left(\mathrm{E}^{4}-\mathrm{F}\right)=1.98 \AA$

| 15 | 16 | 17 | 18 |
| :--- | :--- | :--- | :--- |
| $\mathrm{~d}(\mathrm{P}-\mathrm{F}), 1.50-1.68 \AA$ | $\mathrm{~d}(\mathrm{~S}-\mathrm{F}) 1.52-1.60 \AA$ | $\mathrm{~d}(\mathrm{Cl}-\mathrm{F}), 1.63-1.85 \AA$ |  |
| $\mathrm{~d}(\mathrm{As}-\mathrm{F}), 1.68-1.72 \AA$ | $\mathrm{~d}(\mathrm{Se}-\mathrm{F}), 1.75-1.80 \AA$ | $\mathrm{~d}(\mathrm{Br}-\mathrm{F}), 1.77-1.97 \AA$ | $\mathrm{~d}(\mathrm{Kr}-\mathrm{F}), 1.77-1.89 \AA$ |
| $\mathrm{~d}(\mathrm{Sb}-\mathrm{F}), 1.85-2.05 \AA$ | $\mathrm{~d}(\mathrm{Te}-\mathrm{F}), 1.80-2.00 \AA$ | $\mathrm{~d}(\mathrm{I}-\mathrm{F}), 1.90-2.00 \AA$ | $\mathrm{~d}(\mathrm{Xe}-\mathrm{F}), 1.77-2.00 \AA$ |

Table 1. Typical E-F bond distance ranges for a selection of elements in Groups 15-18

Hints:

1. The specified molecular geometries refer to the arrangement of atoms bonding to $E^{1}-E^{4}$
2. The elemental analysis of $\mathbf{1}$ gives a carbon content of $17.75 \mathrm{wt} . \%$

Assume that molecule $\mathbf{1}$ is a zwitterion, with single formal charges at both $\mathbf{E}^{\mathbf{1}}$ and $\mathbf{E}^{\mathbf{2}}$, thereby giving rise to the hypothetic molecules $\mathbf{1}^{\prime}$ and $\mathbf{1}^{\prime \prime}$, shown below.

## Theory

4.2 Choose which elements $\mathbf{E}^{5} / \mathbf{E}^{6}$ and $\mathbf{E}^{7} / \mathbf{E}^{8}$, respectively, would display the given molecular geometry, including E-F bond distances close to those in 1 (see table 1). Write the answer in the boxes provided on your answer sheet.

## II Reactivity and structure

Consider the reaction shown below:

4
$+\mathrm{Ph}-\mathrm{Te}-\mathrm{Te}-\mathrm{Ph}$

5

6
$+\mathrm{Ph}-\mathrm{Te}-\mathrm{CF}_{3}$

7
4.3 - Specify the ideal geometry of compound 6 in terms of the arrangement of the valence-shell electron-pair domains around the Te atom. Tick the right box on your answer sheet.

- Provide the expected ideal bond angles $\mathrm{C}^{1}-\mathrm{Te}-\mathrm{I}, \mathrm{C}^{2}-\mathrm{Te}-\mathrm{I}, \mathrm{I}-\mathrm{Te}-\mathrm{O}$, and $\mathrm{C}^{1}-\mathrm{Te}-$ $C^{2}$. Write the answer on your answer sheet in the respective box.
4.4 Write the number of ${ }^{1} \mathrm{H}-\mathrm{NMR}$ signals you expect for the two methyl groups in 2.0 pt compounds 4 and 6 respectively on your answer sheet.
4.5 Compound 6 reacts consecutively with AgF and $\left(\mathrm{H}_{3} \mathrm{C}_{3} \mathrm{SiCF}_{3}\left(\mathrm{TMSCF}_{3}\right)\right.$.

Formulate the Te-containing intermediate $\mathbf{A}$ and final product $\mathbf{B}$, including their correct geometry, as well as the byproducts C and D. Draw A and B and write the by-products $\mathbf{C}$ and $\mathbf{D}$ on your answer sheet.
Hint: $M W$ of $\boldsymbol{D}$ is $92.08 \mathrm{~g} \mathrm{~mol}^{-1}$.

## Theory

55 ${ }^{\text {TH }}$ INTERNATIONAL CHEMISTRY OLYMPIAD
SWITZERLAND 2023

Assume that compound 6 reacts with a sterically bulky, chiral, enantiomerically pure Lewis acid, such as the known boron derivative 8, as shown below. This reaction should lead to the formation of a new product 9 the composition of which corresponds to the sum of $\mathbf{6}$ and $\mathbf{8}$. Further assume that $\mathbf{9}$ is a salt, in which the cation derives from 6 and the anion from 8.

## 8

4.6 Draw the structure of both the Te-containing cation and the boron-containing anion and tick the box corresponding to the ideal geometry of the cation in terms of the arrangement of the valence-shell electron-pair domains around the Te atom. Draw on your answer sheet.
Hint: Use for compound 8 (chiral, enantiomerically pure) the following generic schematic representation:

4.7 Write the number of possible stereochemically different salts 9 on your answer $\quad 1.0 \mathrm{pt}$ sheet.

## III Synthesis of a $\boldsymbol{\lambda}^{3}$-difluoroiodane and rotation around a single bond

Compound 12 is prepared from starting material 10 by oxidation with trichloroisocyanuric acid (TCICA, 11) in the presence of excess KF in dry acetonitrile as shown below.

Theory

### 4.8 Formulate balanced half-cell reactions and a balanced overall reaction for this <br> 4.0pt process. Write the reactions on your answer sheet. <br> Hint: Abbreviate 10 as $R-I$ and 12 as $R-I F_{2}$ and TCICA as $\mathrm{C}_{3} \mathrm{Cl}_{3} \mathrm{~N}_{3} \mathrm{O}_{3}$. The sixmembered ring of TCICA stays intact upon reduction.

The $\mathrm{IF}_{2}$ group in 12 can rotate around the I-C bond (imagine a molecular propeller). The corresponding rotation barrier has been measured experimentally: $E_{a}=30 \mathrm{~kJ} \mathrm{~mol}^{-1}$. Furthermore, the rate constant for the rotation is $k=2500 \mathrm{~s}^{-1}$ at 228 K .

12

Theory
4.9 Determine how fast the $\mathrm{IF}_{2}$ group can in principle rotate at room temperature (298 K). Consider this process as if it were a chemical reaction for which you are determining the rate constant. Write your answer on the answer sheet. The unit of the constant should be given in $s^{-1}$.
